COMFORT

the Intelligent Home system

We'll Put You In Your
Comfort Zone

The Comfort Advantage

Comfort is a practical, affordable, state-of-the-art Intellligent Home System which includes the following;

- An Advanced Intruder Alarm System - the Key to an Intelligent Home
- A Home Automation System which can control Lighting, Blinds, Airconditioning, Heating and other appliances.
- Auto-answering with Voicemail
- A Doorphone intercom connected to house phones and mobile phones

Comfort's Benefits - Integration is the Key

Comfort integrates Security, Home Control, and Intercom into a truly Intelligent Home. The benefits of Integration over separate subsystems is that these subsystems can be programmed to work together to provide convenience, comfort, security and energy saving for the family. Practical Home Automation is more than just fancy light switches and expensive touchscreens.

For example;

- When leaving the premises and arming the security system, lights, heating, airconditioning, and selected appliances can be switched off or turned down automatically
- When going to the kitchen for a snack at night, the lights along the way can turn on automatically, and switch themselves off later.
- When there is a break-in exterior and/or interior lights can be switched on depending on the location of the intrusion.
- Time Programs combined with Logic conditions, and sensors can determine when lights, blinds, heating and appliances work.

Expandable, with Industry Standard Interfaces

Comfort can be integrated with many third party Automation products, like KNX, Cbus by Schneider, Philips Dynalite, Zwave, Lutron, Velbus, Rako, Smart House by Carlo Gavazzi and more, with an open protocol for connection to other systems.

World's Most Intelligent Alarm System

Cytech believes the Security System is the heart of an Intelligent Home.

Comfort's advanced security-related features include;

- Dialer to 8 telephone numbers (Mobile phones, Central Monitoring Station and SMS) in the event of any alarm
- Comfort's keypads can be used to listen in on what is happening at home in the event of an alarm and to talk to whoever is at home.
- Keypads with voice announcements tell you what is happening
- Security system expandable to 96 zones, with 16 users and multiple authorisation levels.
- Fully Programmable, with interfaces to lighting, heating, airconditioning and home appliances.
- Vacation Mode to control lighting and sound semi-randomly to give the impression the premises are occupied.

Comfort should be installed by trained System Integrators.

Door Stations/ Intercom

Talk to your visitor using any telephone or keypad in the premises, and when nobody is at home, via your mobile phone. You can even press a button to open the door or gate for the visitor or delivery man.

Voicemail

Comfort can answer the call and record messages into the built in voicemail system. Messages can also be recorded and played back using the home telephone or keypads.

Lighting Control

Comfort can control any industry-standard lighting system and monitor the real time status of all lights.

Blinds/Awnings

Comfort can open or close automated blinds and awnings by Time Programs, or by logic using Sensors for light or Rain

Airconditioning/ Heating

Comfort can control most split-unit airconditioners using Infrared remote control signals, allowing the possibility of controlling fan speed, and temperature as well. Sensors provide feedback of the On/Off state. Comfort can control heaters and HVAC systems.

Time Programs and Reminders

Time Programs can control your security, lights, blinds, and other appliances at selected times of day and days of week, combined with logic conditions and sensors. Recorded messages can be programmed to play on speakers around the home. For example, when a visitor presses the doorbell, a welcome message can be played and the porch lights turned on.

Family Care/ Assistive Living

Comfort's facilities are ideal for assistive living applications (ie disabled people living independently), such as voice reminders, announcements, Time Programs, used with sensors around the home. Those requiring care who are home alone can use a wireless pendant to trigger a dial out to family members who can talk to them via any keypad. Lack of activity can be detected by motion and other sensors so that appropriate measures can be taken.

Baby Monitoring

Any keypad can be used to listen for the baby crying while the mother or carer is elsewhere in the house.through other keypads.

User Interfaces

TeleControl
Call home using any telephone to arm and disarm your security system and to find out the state of lighting and appliances as well as control them using a comprehensive voice menu (available in many languages)

Remote Control
Use a Comfort handheld or a universal learning handheld remote control to control your system

Mobile Applications
Control your entire home using your iPhone or iPad at home and via the Internet. Monitor the state of your doors, windows and sensors and the state of the alarm system as well as the lighting, heating, airconditioning and home appliances.
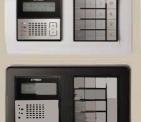

SMS Monitoring and Control
Send SMS to control your home as well as receive text messages when any alarm occurs, or when the security system is armed or disarmed, for example to tell you when your child returns home.
(UCM/GSM Module required).

Keypads and Touchscreens
Comfort's unique wallmounted keypads and touchscreens with built-in speaker and microphone come with various faceplates including glass and wood which can be mounted horizontally or vertically. They can be used to control the alarm as well as anything in the home and can also work as intercoms with the door station and other keypads.

Comfort, the world-proven product
Comfort, now in its second generation, has been installed in many thousands of homes around the world since 1996. Comfort has been type-approved in Europe, Australia, the US, New Zealand, South Africa, China, Singapore, Malaysia
